

STEM

North American Martyrs School has decided to incorporate STEM projects into our Math Enrichment Curriculum (Grades 6-8)! Once each week, students in grades 6-8 will work together to complete STEM challenges. If you are not familiar with STEM and its many benefits please read the brief description below.

What is STEM?

STEM is an acronym for Science, Technology, Engineering and Mathematics. STEM programs and activities focus on the importance of these subject areas and their applications to real-world problems. The need for qualified adults to work in these fields will only continue to increase in the future. As a result, many schools have put an emphasis on the skills required to pursue careers within these subject areas. STEM activities encourage students to collaborate and become innovative and creative problem solvers.

Want MORE information?

Contact Mrs.Morton at morton@namschool.org with questions and comments. If you currently work in a STEM related field and would like to share information about your career with our class we would love to hear from you!

UPCOMING PROJECTS INCLUDE...

Design the boat that can hold the most weight

Design a catapult that is both accurate and precise

Design a roller coaster

Because this program is new, there may be times students are asked to bring household items to class to help us complete these activities!
